

Telescopic Conveyors

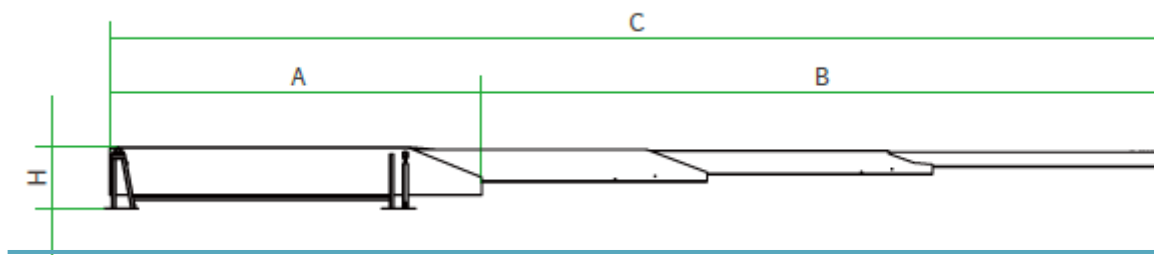

Telescopic Conveyors for Intralogistics

Flexible, efficient, and ergonomic material handling solutions

Our telescopic conveyors are designed to optimize material handling in intralogistics operations. Equipped with hydraulic lifting and motorized extension, they offer maximum flexibility and efficiency in loading and unloading processes. The hydraulic system allows for precise height adjustment, ensuring ergonomic working conditions, while the motorized extension enables fast and controlled length adaptation to reach even the most distant areas of a truck or container. Ideal for warehouses, distribution centers, and production lines, these conveyors significantly reduce loading times and improve workflow safety.

All our telescopic models feature a load capacity of about 50 kg/m and adjustable speed, making them suitable for a wide range of industrial applications. Ideal for warehouses, distribution centers, and production lines, these conveyors significantly reduce loading times and improve workflow safety.

Description	Code	Fixed Length (A)	Extend Length (B)	Total Length (C)	Belt Width
